Both minerals would have to outweigh the droplet that carries them
the whole droplet weighs 1.8 kg per litre
rhomboclase
3.02 kg per litre
6.96 kg per litre if read as napierian
acid ferric sulfate
4.36 kg per litre
10.04 kg per litre if read as napierian
method calibration
ferric chloride, aqueous: 1.278 against the published 1.3 kg per litre
